Lapiplasty™

The Foot & Ankle Center of Frisco is proud to introduce to you a state of the art surgical treatment for correction of moderate to severe bunion deformities. There are currently 70+ procedures available for the correction of the bunion deformity. However, until recently, most bunion procedures described only provide two dimensional correction. While these procedures work well for mild to moderate bunion deformities, if utilized on more severe bunion deformities, the literature has shown a 10-12x increase in recurrence of the bunion.

The Lapiplasty™ by Treace is a three dimensional bunion correction procedure. This technique allows us to correct moderate to severe bunions in 3 planes creating a very strong and lasting correction. The Lapiplasty™ utilizes specialized cutting jigs and guides to ensure precise correction and reproducible results every time. This decreases the chance of excessive shortening and over/under correction of the bunion that has historically been seen with other types of bunion procedures.

Your podiatric surgeons at the Foot & Ankle Center of Frisco have performed dozens of these procedures perfecting the technique and improving countless patients' lives by allowing them to return to normal activities and shoes.

If you have a painful bunion deformity that limits your daily activities or keeps you from wearing shoes, please contact your Lapiplasty™ Specialist at the Foot & Ankle Center of Frisco today.
